

**TASCAM CD-400U/CD-400UDAB  
CONTROL I/O Terminals  
RS-232C/TELNET Protocol Specifications**

**Ver. 1.20**

**Jun/2022**

**TEAC Corporation**

**CAUTION**

TEAC Corporation (hereafter, "TEAC") permits the use of the protocol described in this specification document with the prerequisite that the customer consents to the following protocol use agreement conditions.

If you do not consent to the following conditions in the protocol use agreement, you may not use this protocol and should return this document to TEAC. Moreover, be aware that violations of any of the following items in the protocol use agreement is an infringement on the rights of TEAC and could result in the termination of further use and be subject to restitution claims, for example.

Protocol use agreement

1. This agreement comes into effect from the time the customer starts use of this protocol.
2. TEAC grants a nonexclusive and nontransferable "usage" right to the customer in order to develop devices (including software) that are compatible with the covered TASCAM products.
3. The acquisition of this document by the customer does not mean that the customer has acquired any rights, titles or interests in this protocol other than what is specified in this use agreement. The customer should recognize that as a written work belonging to TEAC, this document is protected based on the copyright laws of the signatory nations of the Universal Copyright Convention and the Berne Convention for the Protection of Literary and Artistic Works. Without exception, the intellectual property in this protocol belongs to TEAC or a source that provides it to TEAC.
4.
  - (1) The customer may not make copies of this specifications document.
  - (2) The customer may not transfer this specifications document to a third party without obtaining prior permission from TEAC.
  - (3) Since confidential information that belongs to TEAC is contained in this specifications document, the customer may not disclose it to a third party without obtaining prior permission from TEAC.
5. This specifications document and this protocol are provided as is. TEAC does not provide any guarantee whatsoever that the contents of this specifications document and the protocol are suitable for the specific purpose of the customer or that they are free of error.
6. TEAC cannot respond to customer inquiries about the contents of this specifications document.
7. TEAC will bear no responsibility for any damages (including business losses, business interruption, loss of business data or other financial damages) arising from the use or inability to use this specifications document or this protocol. This applies even if TEAC is informed about the potential for such damage in advance.

End of Use Agreement

## 1. Overview

The CD-400U/CD-400UDAB ("controlled device") can be controlled from an external device ("external controller"), such as a computer, through a serial RS-232C and ETHERNET (TELNET) connection.

## 2. Specifications

### Serial RS-232C

#### 2.1. Electrical Specifications

|                                      |   |
|--------------------------------------|---|
| Standard:                            | JIS X-5101 (equivalent to the former JIS-C-6361 and EIA RS-232C standards)  |
|                                      | Note that this is not compatible with the RS-422 used in professional VTRs.   |
| Impedance at receiver:               | When measured with an applied voltage between -3 V and +3 V or between -15 V and +15 V, the DC resistance is between 3 k ohms and 7 k ohms.<br>Total load capacitance is 2500 pF or less. |
| Open circuit voltage at transmitter: | 25V or less   |
| Open circuit voltage at receiver:    | 2V or less  |
| Signal voltage:                      | When the open circuit voltage at the receiver is 0 V, the signal voltage is between -5 V and +5 V or between -15 V and +15V against a load impedance between 3 k ohms and 7 k ohms.       |
| Signal discrimination:               | Logic "1": -3V or less<br>Logic "0": +3V or more  |

#### 2.2. Communication format

|                               |                                      |
|-------------------------------|--------------------------------------|
| Circuit type:                 | 3-wire, Half-duplex                  |
| Transmission type:            | Digital binary serial                |
| Data signal rate (baud rate): | 4800/9600/19200/38400/57600 bits/sec |
| Data bits:                    | 8 bits                               |
| Parity bits:                  | None                                 |
| Stop bits:                    | 1 bit                                |

\*Data signal rate can be set from the menu of the controlled device.

**2.3. Connector pin-out**

Connector

D-sub 9pin female (Inch screw thread)

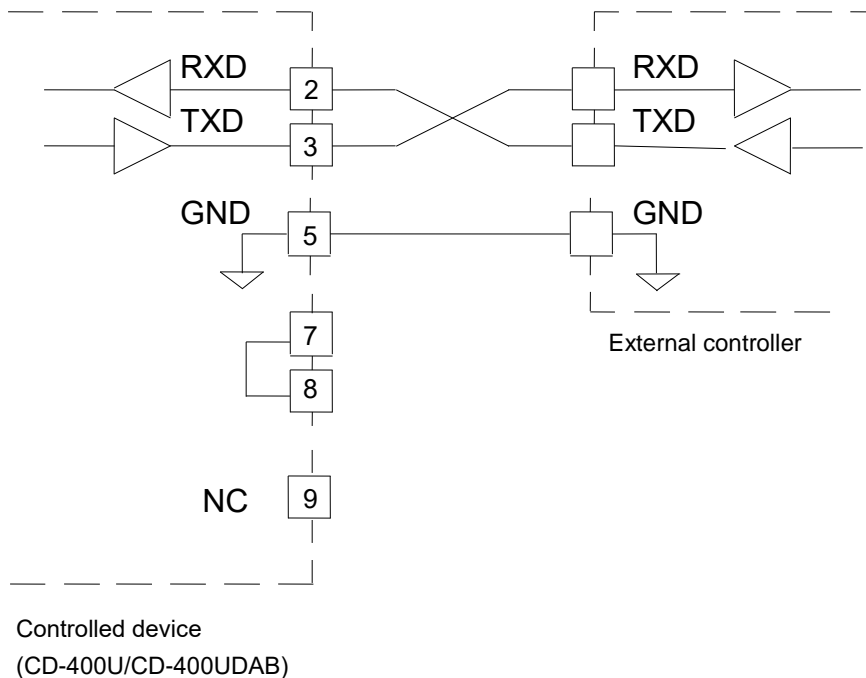

Terminal pin-out and input/output signals

| Pin No. | In/Out | Signal name | Description                    |
|---------|--------|-------------|--------------------------------|
| 1       | -      | NC          | Not connected                  |
| 2       | In     | Rx DATA     | Data received at this pin (*1) |
| 3       | Out    | Tx DATA     | Data transmitted from this pin |
| 4       | -      | (Reserved)  | Reserved                       |
| 5       | -      | GND         | Signal ground pin              |
| 6       | -      | (Reserved)  | Reserved                       |
| 7       | Out    | RTS         | Short-circuit to Pin No. 8.    |
| 8       | In     | CTS         | Short-circuit to Pin No. 7.    |
| 9       | -      | NC          | Not connected                  |

\*1: Make sure that a voltage applied to Pin No. 2 for Rx DATA conforms to the RS-232C standard.

\*2: Pins No. 7 and 8 are short-circuited to receive or transmit RTS/CTS signals.

### 3. Command Format

#### 3.1. Command Format Overview

The command format is as follows.

##### Serial RS-232C

|        |        |         |        |        |        |        |        |     |        |
|--------|--------|---------|--------|--------|--------|--------|--------|-----|--------|
| Byte 1 | Byte 2 | Byte 3  | Byte 4 | Byte 5 | Byte 6 | Byte 7 | Byte 8 | ... | Byte n |
| LF     | ID     | Command |        | Data 1 | Data 2 | Data 3 | Data 4 | ... | CR     |

A command uses a 2-byte ASCII format, starting with Line Field (LF), which is followed by machine ID, and ending with Carriage Return (CR).

For information about machine ID, see the section 3-2 Machine ID.

A command is followed by a byte string, which consists of data ranging from 0 bytes (if the command includes no data) to 98 bytes, maximum.

For detailed information about data, see each of the sections explaining commands. Note that capital letters are used for "A to F" for commands that use 0 to 9 and A to F as data values.

##### Command examples

**Example 1:** Sending the PLAY command to the controlled device with the machine ID=0  
 When the controlled device is in the stop or ready state, the PLAY command starts playing the controlled device.

The PLAY command is [12] and sent in the following format.

|       |     |     |         |     |     |
|-------|-----|-----|---------|-----|-----|
|       |     | ID  | Command |     |     |
| ASCII | LF  | 0   | 1       | 2   | CR  |
| HEX   | 0Ah | 30h | 31h     | 32h | 0Dh |

**Example 2:** Performing a direct search for the track 12 on the controlled device with the machine ID=0

To do a direct search for the track 12, DIRECT TRACK SEARCH PRESET command [23] is sent.

Data bytes consist of 2-byte ASCII characters.

A track number is specified in the DIRECT TRACK SEARCH PRESET command as shown below.

- Data 1    tens digit of the track number to be specified
- Data 2    ones digit of the track number to be specified
- Data 3    thousands digit of the track number to be specified
- Data 4    hundreds digit of the track number to be specified

Based on the above rule, the send command is described as follows.

|       |     |     |         |     |                  |     |     |     |     |
|-------|-----|-----|---------|-----|------------------|-----|-----|-----|-----|
|       |     | ID  | Command |     | Data: 12th track |     |     |     |     |
| ASCII | LF  | 0   | 2       | 3   | 1                | 2   | 0   | 0   | CR  |
| HEX   | 0Ah | 30h | 32h     | 33h | 31h              | 32h | 30h | 30h | 0Dh |

**ETHERNET (TELNET)**

|        |         |   |        |        |        |        |     |     |    |
|--------|---------|---|--------|--------|--------|--------|-----|-----|----|
| Byte 1 | 2       | 3 | 4      | 5      | 6      | 7      | ... | n-1 | n  |
| ID     | Command |   | Data 1 | Data 2 | Data 3 | Data 4 | ... | CR  | LF |

Commands start with an "ID" and end with a carriage return (CR) and a linefeed (LF), and are based on ASCII format. Machine ID (ID) will be explained below.

Commands are expressed as two-byte ASCII.

For details on the data, refer to the detailed explanation for each command. For commands that use 0--9 and A--F as data values, uppercase characters are used for A--F.

**Command examples**

**Example 1:** Sending a PLAY command to a controlled device with Machine ID = 0

When stopped or in playback standby, this command will start playback on the controlled device.

The play command is "12" and is transmitted as follows.

|       |     |         |     |     |     |
|-------|-----|---------|-----|-----|-----|
|       | ID  | Command |     |     |     |
| ASCII | 0   | 1       | 2   | CR  | LF  |
| HEX   | 30h | 31h     | 32h | 0Dh | 0Ah |

**Example 2:** Specifying a direct search for track 123 on a controlled device with Machine ID = 0

The command "DIRECT TRACK (TAKE) SEARCH PRESET [23]" is transmitted to perform this action.

Data bytes are formed of two-byte ASCII units.

For the command "DIRECT TRACK SEARCH PRESET," the track number is specified as follows.

- Data 1 Tens digit for specified track number
- Data 2 Ones digit for specified track number
- Data 3 Thousands digit for specified track number
- Data 4 Hundreds digit for specified track number

Therefore, the transmitted command is as follows.

|       |     |         |     |                |     |     |     |     |     |
|-------|-----|---------|-----|----------------|-----|-----|-----|-----|-----|
|       | ID  | Command |     | Data: take 123 |     |     |     |     |     |
| ASCII | 0   | 2       | 3   | 2              | 3   | 0   | 1   | CR  | LF  |
| HEX   | 30h | 32h     | 33h | 32h            | 33h | 30h | 31h | 0Dh | 0Ah |

**3.2. Machine ID**

The Machine ID is fixed at [0]. A command with the machine ID other than [0] is ignored.

### 3.3. Command Sequence

In most cases, the controlled device does not send an ACK command in response to a transport control command or data preset command that is sent from an external controller.

The controlled device sends a return command in response to a data sense command that requests the controlled device to return the controlled device's preset data values.

If the controlled device switches from one state to another - from stop state to playback state, for example, or if an error occurs, the controlled device sends a command to notify the external controller about the state transition.

Examples of command sequences are shown below.

Make sure that commands are sent at a minimum of 100-millisecond intervals.

Example 1: Using a transport control of the controlled device (e.g. playback)

When entering the playback state after receiving the playback command, the controlled device sends the CHANGE STATUS command.

The controlled device does not send an ACK command in response to this command.

| Command             |                   | Status of the controlled device                           |
|---------------------|-------------------|---|
| External controller | Controlled device |   |
|                     |                   | STOP  |
| PLAY                | ->                |   |
|                     | <-                | CHANGED STATUS  |
|                     |                   | Sent when the controlled device enters the playback state |

Example 2: Presetting data (e.g. pitch control data)

When receiving the RESUME PLAY SELECT command, the controlled device sets the pitch control data.

The controlled device does not send an ACK command in response to this command.

| Command                   |                   | Status of the controlled device     |
|---------------------------|-------------------|-------------------------------------|
| External controller       | Controlled device |                                     |
| PLAY MODE SELECT (Single) | ->                | Sets the resume play mode to single |

Example 3: Requesting currently set data (e.g. pitch control data)

When receiving the PLAY MODE SENSE (Sense) command, the controlled device sends the set play mode status.

| Command                 |                   | Status of the controlled device |
|-------------------------|-------------------|---------------------------------|
| External controller     | Controlled device |                                 |
| PLAY MODE SENSE (Sense) | ->                |                                 |
|                         | <-                | PLAY MODE RETURN                |

#### Command details

The commands, data and Machine ID given here are ASCII characters.

Commands are 2-byte characters, the Machine ID is a 1-byte character and Data are each 1-byte characters.

The specifications for take and project numbers that this unit can handle are as follows. If a number is specified for an item that does not exist, however, the command will be treated as invalid.

|                              |             |
|------------------------------|-------------|
| Track number (MP3/WAV MEDIA) | 999 maximum |
| Track number (Audio CD)      | 99 maximum  |

**3.4. List of Commands**

**List of main commands**

| Control/Preset/Sense Command |                                  | Return Command |                                   | Adopted F/W Ver. |
|------------------------------|----------------------------------|----------------|-----------------------------------|------------------|
| 0F                           | INFORMATION REQUEST              | 8F             | INFORMATION RETURN                |                  |
| 10                           | STOP                             |                |                                   |                  |
| 12                           | PLAY                             |                |                                   |                  |
| 14                           | READY                            |                |                                   |                  |
| 16                           | SEARCH                           |                |                                   | 1.14             |
| 18                           | EJECT                            |                |                                   |                  |
| 1A                           | TRACK SKIP                       |                |                                   |                  |
| 23                           | DIRECT TRACK SEARCH PRESET       |                |                                   |                  |
| 34                           | RESUME PLAY SELECT               | B4             | RESUME PLAY SELECT RETURN         |                  |
| 37                           | REPEAT SELECT                    | B7             | REPEAT SELECT RETURN              |                  |
| 3A                           | INCR PLAY SELECT                 | BA             | INCR PLAY SELECT RETURN           |                  |
| 4A                           | CLEAR                            |                |                                   | 1.14             |
| 4C                           | REMOTE/LOCAL SELECT              | CC             | REMOTE/LOCAL SELECT RETURN        |                  |
| 4D                           | PLAY MODE SELECT                 |                |                                   |                  |
| 4E                           | PLAY MODE SENSE                  | CE             | PLAY MODE RETURN                  |                  |
| 50                           | MECHA STATUS SENSE               | D0             | MECHA STATUS RETURN               |                  |
| 55                           | TRACK NO. SENSE                  | D5             | TRACK NO. RETURN                  |                  |
| 56                           | MEDIA STATUS SENSE               | D6             | MEDIA STATUS RETURN               |                  |
| 57                           | CURRENT TRACK INFORMATION SENSE  | D7             | CURRENT TRACK INFORMATION RETURN  |                  |
| 58                           | CURRENT TRACK TIME SENSE         | D8             | CURRENT TRACK TIME RETURN         |                  |
| 5D                           | TOTAL TRACK NO./TOTAL TIME SENSE | DD             | TOTAL TRACK NO./TOTAL TIME RETURN |                  |
|                              |                                  | F0             | ERROR SENSE REQUEST               |                  |
|                              |                                  | F1             | CAUTION SENSE REQUEST             |                  |
|                              |                                  | F2             | ILLEGAL STATUS                    |                  |
|                              |                                  | F4             | POWER ON STATUS                   |                  |
|                              |                                  | F6             | CHANGE STATUS                     |                  |
| 78                           | ERROR SENSE                      | F8             | ERROR SENSE RETURN                |                  |
| 79                           | CAUTION SENSE                    | F9             | CAUTION SENSE RETURN              |                  |
| 7F                           | VENDOR COMMAND                   | FF             | VENDOR COMMAND RETURN             |                  |

Caution: If no supported version is indicated in the "Adopted F/W Ver." column, ver. 1.00 or later are supported.

**List of vendor commands**

The list of vendor commands (Command 7F/FF) is as follows.

Their command codes are indicated as a combination of Command (2-byte), Category Code (2-byte) and Sub Command (2-byte). For details, see the section starting page 24.

| Control/Sense Command |                  | Return Command |                         | Adopted F/W Ver. |
|-----------------------|------------------|----------------|-------------------------|------------------|
| 7F01                  | DEVICE SELECT    | FF01           | DEVICE SELECT RETURN    |                  |
| 7F074F                | PLAY AREA SELECT | FF07CF         | PLAY AREA SELECT RETURN |                  |
| 7F7049                | ENTER            |                |                         | 1.14             |
| 7F704A                | BACK             |                |                         | 1.14             |
|                       |                  |                |                         |                  |

Caution: If no supported version is indicated in the "Adopted F/W Ver." column, ver. 1.00 or later are supported.

### 3.5. Command Details

#### INFORMATION REQUEST

INFORMATION REQUEST requests the controlled device to return information including the software version of the controlled device.

|         |                         |
|---------|-------------------------|
| Command | 0F                      |
| Data    | None                    |
| Return  | INFORMATION RETURN [8F] |

#### STOP

STOP puts the controlled device into the stop state.

If the mode is FM, AM or DAB, this command switches between frequency and preset modes.

|         |      |
|---------|------|
| Command | 10   |
| Data    | None |
| Return  | None |

#### PLAY

Play puts the controlled device into playback mode.

|         |      |
|---------|------|
| Command | 12   |
| Data    | None |
| Return  | None |

**READY**

READY puts the controlled device into playback standby mode.

Command 14  
 Data 2 bytes  
 Return None

| Data 1 | Data 2 | Description | Remarks                            |
|--------|--------|-------------|------------------------------------|
| 0      | 1      | Ready ON    | Switches to playback standby mode. |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**SEARCH**

When the source is CD, USB or SD, SEARCH puts the controlled device into the search playback mode. The controlled device remains in the search playback mode until it receives a command such as STOP, PLAY, or READY.

When the source is FM or AM, this command automatically searches for received frequencies in the higher or lower direction.

Command 16  
 Data 2 bytes  
 Return None

| Data 1 | Data 2 | Description             | Remarks  |
|--------|--------|-------------------------|--|
| 0      | 0      | Search Forward (Normal) | (CD/USB/SD) Search (playback) in the forward direction. (Normal speed)<br>(FM/AM) Search for received frequencies in the higher direction. |
| 0      | 1      | Search Reverse (Normal) | (CD/USB/SD) Search (playback) in the backward direction. (Normal speed)<br>(FM/AM) Search for received frequencies in the lower direction. |
| 1      | 0      | Search Forward (High)   | (CD/USB/SD) Search (playback) in the forward direction. (High speed)   |
| 1      | 1      | Search Reverse (High)   | (CD/USB/SD) Search (playback) in the backward direction. (High speed)  |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**EJECT**

EJECT ejects a CD Media from the controlled device.

If the device selected on the controlled device is not CD, this command ejects the CD Media.

Command 18  
 Data None  
 Return None

**TRACK SKIP**

SKIP allows the controlled device to skip a track.

If the mode is FM or AM and a preset number is not displayed (Frequency mode), this command changes the received frequency.

If the mode is FM or AM and a preset number is displayed (Preset mode), this command moves to the previous or next preset number.

Command 1A  
 Data 2 bytes  
 Return None

| Data 1 | Data 2 | Description         | Remarks   |
|--------|--------|---------------------|---|
| 0      | 0      | Track Skip Next     | Skips to the next track   |
| 0      | 1      | Track Skip Previous | If the current position is at the beginning of a track (or within one second of the beginning of a track), the controlled device skips to the beginning of the previous track. If the current position is not at the beginning of a track, the controlled device skips to the beginning of the current track. |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**DIRECT TRACK SEARCH PRESET**

DIRECT TRACK SEARCH PRESET performs a search for a track on the controlled device by specifying the track number. If a track search is performed while the controlled device is in a playback state or a stop state, the controlled device starts playing the selected track first.

If a track search is performed while the controlled device is in a state other than the above two states, the controlled device switches back to the state where it was before starting a search and remains in that state.

When the source is AM, FM or DAB, this performs selection of a preset station by specifying the preset number.

Command 23  
 Data 4 bytes  
 Return None

|               | Description   | Remarks   |
|---------------|---|---|
| <b>Data 1</b> | Tens digit of the track number<br>Tens digit of the preset number (AM/FM/DAB) | Track number<br>Example) 2301: Track 123<br>Preset number<br>Example) 1200: Preset 12 |
| <b>Data 2</b> | Ones digit of the track number<br>Ones digit of the preset number (AM/FM/DAB) |   |
| <b>Data 3</b> | Thousands digit of the track number<br>Always 0 (AM/FM/DAB)                   |   |
| <b>Data 4</b> | Hundreds digit of the track number<br>Always 0 (AM/FM/DAB)                    |   |

If the track number specified does not exist in the media, it sends ILLEGAL [F2].

If the preset number specified is larger than 20, it sends ILLEGAL [F2].

**RESUME PLAY SELECT**

RESUME PLAY SELECT turns the resume play mode of the controlled device on or off.

Only when this command is sent with request data [FF], the controlled device sends the REPEAT SELECT RETURN command [B4].

Command 34  
 Data 2 bytes  
 Return RESUME PLAY SELECT RETURN [B4]

| Data 1 | Data 2 | Description     | Remarks   |
|--------|--------|-----------------|---|
| 0      | 0      | Resume play OFF |   |
| 0      | 1      | Resume play ON  |   |
| F      | F      | Sense           | Requests the controlled device to return the current resume play mode setting |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**REPEAT SELECT**

REPEAT SELECT turns the repeat mode of the controlled device on or off.

Only when this command is sent with request data [FF], the controlled device sends the REPEAT SELECT RETURN command [B7].

Command 37  
 Data 2 bytes  
 Return REPEAT SELECT RETURN [B7]

| Data 1 | Data 2 | Description | Remarks  |
|--------|--------|-------------|--|
| 0      | 0      | Repeat OFF  |  |
| 0      | 1      | Repeat ON   |  |
| F      | F      | Sense       | Requests the controlled device to return the current repeat mode setting |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**INCR PLAY SELECT**

INCR PLAY SELECT turns the incremental playback mode of the controlled device on or off.

Only when this command is sent with request data [FF], the controlled device sends the INCR PLAY SELECT RETURN command [BA].

Command 3A  
 Data 2 bytes  
 Return INCR PLAY SELECT RETURN [BA]

| Data 1 | Data 2 | Description              | Remarks  |
|--------|--------|--------------------------|--|
| 0      | 0      | Incremental playback OFF |  |
| 0      | 1      | Incremental playback ON  |  |
| F      | F      | Sense                    | Requests the controlled device to return the current incremental playback mode setting |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**CLEAR**

CLEAR replies no or cancel when a message is displayed. (Same as CLEAR button)

Command: 4A  
 Data: None  
 Return: None

**REMOTE/LOCAL SELECT**

REMOTE/LOCAL SELECT enables or disables key operation on the controlled device.

Only when this command is sent with request data [FF], the controlled device sends the REMOTE/LOCAL RETURN command [CC].

Command 4C  
 Data 2 bytes  
 Return REMOTE/LOCAL SELECT RETURN [CC]

| Data 1 | Data 2 | Description          | Remarks   |
|--------|--------|----------------------|---|
| 0      | 0      | Only remote          | Enables only remote operation through an RS-232C connector, ETHERNET and the IR remote control. Key operation on the controlled device is disabled.<br>Keys on the front panel: Disable<br>RS-232C & Ethernet: Enable<br>IR remote control: Enable                  |
| 0      | 1      | Remote and Front key | Enables remote operation and key operation on the controlled device<br>All are enabled.   |
| 1      | 0      | Serial control only  | Enables only remote operation through an RS-232C, ETHERNET. Key operation on the controlled device and remote operation through the IR remote control are disabled.<br>Keys on the front panel: Disable<br>RS-232C & Ethernet: Enable<br>IR remote control: Disable |
| 1      | 1      | IR remote disable    | Enables remote operation through an RS-232C, ETHERNET and key operation on the controlled device. Remote operation through the IR remote control is disabled.<br>Keys on the front panel: Enable<br>RS-232C & Ethernet: Enable<br>IR remote control: Disable        |
| F      | F      | Sense                | Requests the controlled device to return the current remote/local mode setting  |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**PLAY MODE SELECT**

PLAY MODE SELECT sets the playback mode of the controlled device.

The playback mode setting can be checked using the PLAY MODE SENSE command [4E].

Command        4D  
Data            2 bytes  
Return         None

| Data 1 | Data 2 | Description | Remarks             |
|--------|--------|-------------|---------------------|
| 0      | 0      | Continuous  | Continuous playback |
| 0      | 1      | Single      | Single playback     |
| 0      | 6      | Random      | Random playback     |

**PLAY MODE SENSE**

PLAY MODE SENSE requests the controlled device to return the current playback mode setting of the controlled device.

Command        4E  
Data            None  
Return         PLAY MODE RETURN [CE]

**MECHA STATUS SENSE**

MECHA STATUS SENSE requests the controlled device to return the status of the specified mechanism of the controlled device.

Command        50  
Data            None  
Return         MECHA STATUS RETURN [D0]

**TRACK No. SENSE**

TRACK No. SENSE requests the controlled device to return the current track number or the current preset number.

Command:       55  
Data:           None  
Return:         TRACK No. RETURN [D5]

**MEDIA STATUS SENSE**

MEDIA STATUS SENSE requests the controlled device to return information about the presence or absence and the type of a media in the controlled device.

Command        56  
Data            None  
Return         MEDIA STATUS RETURN [D6]

**CURRENT TRACK INFORMATION SENSE**

CURRENT TRACK INFORMATION SENSE requests the controlled device to return information about the current track or the current preset and frequency of the tuner.

Command        57  
 Data            None  
 Return         CURRENT TRACK INFORMATION RETURN [D7]

**CURRENT TRACK TIME SENSE**

CURRENT TRACK TIME SENSE requests the controlled device to return the selected time information about the current track or the whole media, when in a playback or a ready state. Track remaining time (01), Total elapsed time on the media (02) and Total remaining time on the media (03) are not supported when the media is Data-CD, USB or SD.

Command        58  
 Data            2 bytes  
 Return         CURRENT TRACK TIME RETURN [D8]

| Data 1 | Data 2 | Description                       | Remarks        |
|--------|--------|-----------------------------------|----------------|
| 0      | 0      | Track elapsed time                |                |
| 0      | 1      | Track remaining time              | Only for CD-DA |
| 0      | 2      | Total elapsed time on the media   | Only for CD-DA |
| 0      | 3      | Total remaining time on the media | Only for CD-DA |

·If the controlled device receives data other than the above data, it sends ILLEGAL (F2).

**TOTAL TRACK No./TOTAL TIME SENSE**

TOTAL TRACK No./TOTAL TIME SENSE requests the controlled device to return the total number of tracks on the media and the total running time of the media in the controlled device.

Command        5D  
 Data            None  
 Return         TOTAL TRACK No./TOTAL TIME RETURN [DD]

**ERROR SENSE**

ERROR SENSE requests the controlled device to return information about an error that occurred on the controlled device. Be sure to determine the error by using this command if the ERROR SENSE REQUEST command [F0] is issued from the controlled device.

Command:        78  
 Data:            None  
 Return:         ERROR SENSE RETURN [F8]

**CAUTION SENSE**

CAUTION SENSE requests the controlled device to return information about a caution that is shown on the controlled device. Be sure to check the caution by using this command if the CAUTION SENSE REQUEST command [F1] is issued from the controlled device.

Command:        79  
 Data:            None  
 Return:         CAUTION SENSE RETURN [F9]

**VENDOR COMMAND**

This command controls a function unique to this unit. For details, see "**Detailed information about Vendor Commands**" on page 24.

Command:        7F  
 Return:         VENDOR COMMAND RETURN [FF]

### INFORMATION RETURN

INFORMATION RETURN is sent in response to the INFORMATION REQUEST command [0F] to show the software version.

Command                      8F  
 Data                            4 bytes  
 Request command            INFORMATION REQUEST [0F]

|               | Description                                  | Remarks                      |
|---------------|--|------------------------------|
| <b>Data 1</b> | Tens digit of the software version           | Example) 0123: Version 01.23 |
| <b>Data 2</b> | Ones digit of the software version           |                              |
| <b>Data 3</b> | First decimal place of the software version  |                              |
| <b>Data 4</b> | Second decimal place of the software version |                              |

### RESUME PLAY SELECT RETURN

RESUME PLAY SELECT RETURN is sent in response to the RESUME PLAY SELECT command [34] to show the current resume play mode setting.

Command                      B4  
 Data                            2 bytes  
 Request command            RESUME PLAY SELECT [34]

| Data 1 | Data 2 | Description     | Remarks |
|--------|--------|-----------------|---------|
| 0      | 0      | Resume play OFF |         |
| 0      | 1      | Resume play ON  |         |

### REPEAT SELECT RETURN

REPEAT SELECT RETURN is sent in response to the REPEAT SELECT command [37] to show the current repeat setting.

Command                      B7  
 Data                            2 bytes  
 Request command            REPEAT SELECT [37]

| Data 1 | Data 2 | Description | Remarks |
|--------|--------|-------------|---------|
| 0      | 0      | Repeat OFF  |         |
| 0      | 1      | Repeat ON   |         |

**INCR PLAY SELECT RETURN**

INCR PLAY SELECT RETURN is sent in response to the INCR PLAY SELECT command [3A] to show the current incremental playback setting.

Command BA  
 Data 2 bytes  
 Request command INCR PLAY SELECT [3A]

| Data 1 | Data 2 | Description       | Remarks |
|--------|--------|-------------------|---------|
| 0      | 0      | INCR playback OFF |         |
| 0      | 1      | INCR playback ON  |         |

**REMOTE/LOCAL SELECT RETURN**

REMOTE/LOCAL SELECT RETURN is sent in response to the REMOTE/LOCAL SELECT command [4C] to show the current remote/local mode setting.

Command CC  
 Data 2 bytes  
 Request command REMOTE/LOCAL SELECT [4C]

| Data 1 | Data 2 | Description          | Remarks   |
|--------|--------|----------------------|---|
| 0      | 0      | Only remote          | Enables only remote operation through an RS-232C connector, ETHERNET and the IR remote control. Key operation on the controlled device is disabled.<br>Keys on the front panel: Disable<br>RS-232C & Ethernet: Enable<br>IR remote control: Enable                  |
| 0      | 1      | Remote and Front key | Enables remote operation and key operation on the controlled device<br>All are enabled.   |
| 1      | 0      | Serial control only  | Enables only remote operation through an RS-232C, ETHERNET. Key operation on the controlled device and remote operation through the IR remote control are disabled.<br>Keys on the front panel: Disable<br>RS-232C & Ethernet: Enable<br>IR remote control: Disable |
| 1      | 1      | IR remote disable    | Enables remote operation through an RS-232C, ETHERNET and key operation on the controlled device. Remote operation through the IR remote control is disabled.<br>Keys on the front panel: Enable<br>RS-232C & Ethernet: Enable<br>IR remote control: Disable        |

**PLAY MODE RETURN**

PLAY MODE RETURN is sent in response to the PLAY MODE SENSE command [4E] to show the current playback mode setting.

Command                    CE  
 Data                        2 bytes  
 Request command        PLAY MODE SENSE [4E]

| Data 1 | Data 2 | Description         | Remarks |
|--------|--------|---------------------|---------|
| 0      | 0      | Continuous playback |         |
| 0      | 1      | Single playback     |         |
| 0      | 6      | Random playback     |         |

**MECHA STATUS RETURN**

MECHA STATUS RETURN is sent in response to the MECHA STATUS SENSE command [50] to show the current status of the specified mechanism of the controlled device.

Command                    D0  
 Data                        2 bytes  
 Request command        MECHA STATUS SENSE [50]

| Data 1 | Data 2 | Description                 | Remarks                      |
|--------|--------|-----------------------------|------------------------------|
| 0      | 0      | No Media                    | No Media                     |
| 0      | 1      | Preparing for disc ejection | In disc-ejecting state       |
| 1      | 0      | Stop                        | In stop state                |
| 1      | 1      | Play                        | In playback state            |
| 1      | 2      | Ready                       | In ready state               |
| 2      | 8      | Searching forward           | In search forward state      |
| 2      | 9      | Searching backward          | In search backward state     |
| 8      | 1      | Record                      | In recording state           |
| 8      | 2      | Record ready                | In record ready state        |
| 8      | 3      | Information writing         | In information writing state |
| F      | F      | Other                       | Some other status            |

**TRACK No. RETURN**

TRACK No. RETURN is sent in response to the TRACK No. SENSE command [55] to show the current track number or the current preset number.

Command                    D5  
 Data                        6 bytes  
 Request command        TRACK No. SENSE [55]

|               | Description   | Remarks |
|---------------|---|---------|
| <b>Data 1</b> | Tens digit of the track number<br>Tens digit of the preset number (AM/FM/DAB) |         |
| <b>Data 2</b> | Ones digit of the track number<br>Ones digit of the preset number (AM/FM/DAB) |         |
| <b>Data 3</b> | Thousands digit of the track number<br>Always 0 (AM/FM/DAB)                   |         |
| <b>Data 4</b> | Hundreds digit of the track number<br>Always 0 (AM/FM/DAB)                    |         |

If the source is AM, FM or DAB and in frequency mode, it sends ILLEGAL [F2].

### MEDIA STATUS RETURN

MEDIA STATUS RETURN is sent in response to the MEDIA STATUS SENSE command [56] to show the presence or absence of a media and the type of the media.

Command                    D6  
 Data                        4 bytes  
 Request command        MEDIA STATUS SENSE [56]

|               |              |                      |
|---------------|--------------|----------------------|
| <b>Data 1</b> | Media status | 00: No media         |
| <b>Data 2</b> |              | 01: Media loaded     |
| <b>Data 3</b> | Media type   | 00: CD-DA, SD or USB |
| <b>Data 4</b> |              | 10: CD-ROM (Data)    |

### CURRENT TRACK INFORMATION RETURN

CURRENT TRACK INFORMATION RETURN is sent in response to the CURRENT TRACK INFORMATION SENSE command [57] to show information about current track when the source is CD, USB or SD or information about the current preset and frequency when the source is AM, FM or DAB.

Command                    D7  
 Data                        12 bytes  
 Request command        CURRENT TRACK INFORMATION SENSE [57]

|                | Description   | Remarks  |
|----------------|---|--|
| <b>Data 1</b>  | Tens digit of the track number<br>Tens digit of the preset number (AM/FM/DAB)   |  |
| <b>Data 2</b>  | Ones digit of the track number<br>Ones digit of the preset number (AM/FM/DAB)   |  |
| <b>Data 3</b>  | Thousands digit of the track number<br>Thousands digit of the preset number, always 0 (AM/FM/DAB)   |  |
| <b>Data 4</b>  | Hundreds digit of the track number<br>Hundreds digit of the preset number, always 0 (AM/FM/DAB)   |  |
| <b>Data 5</b>  | Tens digit of the minutes<br>Ten-thousands digit of the frequency (kHz) (AM)<br>Hundreds digit of the frequency (MHz) (FM)<br>The 1 <sup>st</sup> character of the DAB channel number (DAB) |  |
| <b>Data 6</b>  | Ones digit of the minutes<br>Thousands digits of the frequency (kHz) (AM)<br>Tens digit of the frequency (MHz) (FM)<br>The 2 <sup>nd</sup> character of the DAB channel number (DAB)        |  |
| <b>Data 7</b>  | Thousands digit of the minutes<br>Hundreds digit of the frequency (kHz) (AM)<br>Ones digit of the frequency (MHz) (FM)<br>The 3 <sup>rd</sup> character of the DAB channel number (DAB)     |  |
| <b>Data 8</b>  | Hundreds digit of the minutes<br>Tens digit of the frequency (kHz) (AM)<br>Tenths digit of the frequency (MHz) (FM)<br>Tens digit of the service number (DAB)                               |  |
| <b>Data 9</b>  | Tens digit of the seconds<br>Ones digit of the frequency (kHz) (AM)<br>Hundredths digit (MHz) (FM)<br>Ones digit of the service number (DAB)  |  |
| <b>Data 10</b> | Ones digit of the seconds<br>Reserved. Always 0 (AM/FM/DAB)   |  |
| <b>Data 11</b> | (Tens digit of the frames)  | Frames are not supported. Data 11 and 12 are always 0. |
| <b>Data 12</b> | (Ones digit of the frames)  |  |

**CURRENT TRACK TIME RETURN**

CURRENT TRACK TIME RETURN is sent in response to the CURRENT TRACK TIME SENSE command [58] to show the selected time information about the current track.

Command D8  
 Data 10 bytes  
 Request command CURRENT TRACK TIME SENSE [58]

|                         |    | Description                       | Remarks   |
|-------------------------|----|-----------------------------------|---|
| <b>(Data 1, Data 2)</b> | 00 | Elapsed time                      | 01, 02 and 03 are not supported when the media is Data-CD, USB or SD, When the media is CD-DA and Play mode is random, 02 and 03 is not supported. Elapsed time (00) is returned. |
|                         | 01 | Track remaining time              |   |
|                         | 02 | Total elapsed time on the media   |   |
|                         | 03 | Total remaining time on the media |   |
| <b>Data 3</b>           | -- | Tens digit of the minutes         |   |
| <b>Data 4</b>           | -- | Ones digit of the minutes         |   |
| <b>Data 5</b>           | -- | Thousands digit of the minutes    |   |
| <b>Data 6</b>           | -- | Hundreds digit of the minutes     |   |
| <b>Data 7</b>           | -- | Tens digit of the seconds         |   |
| <b>Data 8</b>           | -- | Ones digit of the seconds         |   |
| <b>Data 9</b>           | 0  | (Tens digit of the frame)         | Frames are not supported. Data 9 and 10 are always 0.   |
| <b>Data10</b>           | 0  | (Ones digit of the frame)         |   |

**TOTAL TRACK No./TOTAL TIME RETURN**

TOTAL TRACK No./TOTAL TIME RETURN is sent in response to the TOTAL TRACK No./TOTAL TIME SENSE command [5D] to show the total number of tracks on a media and the total running time of the media in the controlled device.

Command DD  
 Data 12 bytes  
 Request command TOTAL TRACK No./TOTAL TIME SENSE [5D]

|               | Description  | Remarks   |
|---------------|--|---|
| <b>Data 1</b> | Tens digit of the total number of tracks                 |   |
| <b>Data 2</b> | Ones digit of the total number of tracks                 |   |
| <b>Data 3</b> | Thousands digit of the total number of tracks            |   |
| <b>Data 4</b> | Hundreds digit of the total number of tracks             |   |
| <b>Data 5</b> | Tens digit of the minutes                                | Data-CD, USB and SD don't support total time. In this case, Data 5 – 12 are always 0. |
| <b>Data 6</b> | Ones digit of the minutes                                |   |
| <b>Data 7</b> | Thousands digit of the minutes                           |   |
| <b>Data 8</b> | Hundreds digit of the minutes                            |   |
| <b>Data 9</b> | Tens digit of the seconds                                |   |
| <b>Data10</b> | Ones digit of the seconds                                |   |
| <b>Data11</b> | (Tens digit of the total number of frames of all tracks) | Frames are not supported. Data 11 – 12 are always 0.                                  |
| <b>Data12</b> | (Ones digit of the total number of frames of all tracks) |   |

**ERROR SENSE REQUEST**

ERROR SENSE REQUEST is sent from the controlled device to the external controller to show that the controlled device is in an error state. If the command is sent, the external controller issues the ERROR SENSE command [78]. Be sure to determine the error by using the ERROR SENSE command.

Command F0  
 Data None  
 Request command None

**CAUTION SENSE REQUEST**

CAUTION SENSE REQUEST is sent from the controlled device to the external controller to show that the controlled device is in a caution state. If the command is sent, the external controller issues the CAUTION SENSE command [79]. Be sure to check the caution by using the CAUTION SENSE command.

Command F1  
 Data None  
 Request command None

**ILLEGAL STATUS**

ILLEGAL STATUS is sent from the controlled device to the external controller to show that an invalid command or data has been sent to the controlled device. If the command is sent, send a command or data again, making sure that it is a valid command or data.

Command F2  
 Data None  
 Request command None

**POWER ON STATUS**

POWER ON STATUS is sent from the controlled device to the external controller to show that the controlled device has been turned on.

Command F4  
 Data None  
 Request command None

**CHANGE STATUS**

CHANGE STATUS is sent from the controlled device to the external controller to show that the controlled device has switched from one state to another.

Command F6  
 Data 2 bytes  
 Request command None

| Data 1 | Data 2 | Description   | Remarks  |
|--------|--------|---|--|
| 0      | 0      | Mechanism status change   | The status of the specified mechanism has been changed.  |
| 0      | 3      | Track, Tuner Preset number, Tuner frequency, DAB station and EOM status changes | The controlled device has moved from one track to another or the EOM status has been changed. (CD/USB/SD)<br>It has moved from one frequency, preset number or DAB station to another. (AM/FM/DAB) |

**ERROR SENSE RETURN**

ERROR SENSE RETURN is sent in response to the ERROR SENSE command [78].

Command F8  
 Data 4 bytes  
 Request command ERROR SENSE [78]

| Data 1 | N2 | ERROR CODE (N1-N2N3)   |
|--------|----|--|
| Data 2 | N3 | 0-00 No Error  |
| Data 3 | 0  | 1-01 Dubbing Error (error related to recording)                              |
| Date 4 | N1 | 1-02 Device Error (error related to device)                                  |
|        |    | 1-FF Other Error (An error other than those above occurred. Check the unit.) |

**CAUTION SENSE RETURN**

CAUTION SENSE RETURN is sent in response to the CAUTION SENSE command [79].

Command F9  
 Data 4 bytes  
 Request command CAUTION SENSE [79]

|        |    |   |
|--------|----|---|
| Data 1 | N2 | CAUTION CODE (N1-N2N3)  |
| Data 2 | N3 |   |
| Data 3 | 0  |   |
| Data 4 | N1 |   |
|        |    | 0-00 No Caution   |
|        |    | 1-02 Media Error (error related to media)                                       |
|        |    | 1-06 Media Full (media has no remaining capacity)                               |
|        |    | 1-0C Write Protected (media is write-protected)                                 |
|        |    | 1-0D Not Execute (function cannot be executed in this state)                    |
|        |    | 1-13 Can't Select (selecting is not possible in this state)                     |
|        |    | 1-16 Name Full (name setting character upper limit has been reached)            |
|        |    | 1-1E Decode Error (error related to playback)                                   |
|        |    | 1-1F Media Not Match (media is not suitable)                                    |
|        |    | 1-FF Other Caution (A caution other than those above occurred. Check the unit.) |

**VENDOR COMMAND RETURN**

This is the returned command in response to the command [7F].  
 See "**Detailed Information about Vendor Commands**" below.

Command FF

**Detailed information about Vendor Commands**

Vendor commands have the following format.

**Serial RS-232C**

|        |        |              |        |               |        |             |        |           |     |        |
|--------|--------|--------------|--------|---------------|--------|-------------|--------|-----------|-----|--------|
| Byte 1 | Byte 2 | Byte 3       | Byte 4 | Byte 5        | Byte 6 | Byte 7      | Byte 8 | Byte 9    | ... | Byte n |
| LF     | ID     | Command      |        | Data 1        | Data 2 | Data 3      | Data 4 | Data 5    | ... | CR     |
| LF     | '0'    | '7F' or 'FF' |        | Category Code |        | Sub Command |        | Parameter | ... | CR     |

**ETHERNET (TELNET)**

|        |              |   |               |        |             |        |           |     |     |    |
|--------|--------------|---|---------------|--------|-------------|--------|-----------|-----|-----|----|
| Byte 1 | 2            | 3 | 4             | 5      | 6           | 7      | 8         | ... | n-1 | n  |
| ID     | Command      |   | Data 1        | Data 2 | Data 3      | Data 4 | Data 5    | ... | LF  | CR |
| '0'    | '7F' or 'FF' |   | Category Code |        | Sub Command |        | Parameter | ... | LF  | CR |

Category Code: The category code (2-byte ASCII) is used for classifying vendor commands according to function.

Sub Command: This is a unique sub-command code (2-byte ASCII) within the category.  
 DEVICE SELECT (01), DIVIDE(02) and DELETE(03) is the only category that has no sub command.  
 DEVICE SELECT (01) is Data 3 and higher are parameters.

Parameter: This is a parameter added to the command code (ASCII, length differs for each sub command.)

Below is the list of category codes.

| Category Code | Category classification | Description                                |
|---------------|-------------------------|--|
| 01            | DEVICE SELECT           | Selects the device to be used (SD, USB,CD) |
| 07            | Playback                | Setting related to playback                |

**DEVICE SELECT**

DEVICE SELECT changes the device to be used on the controlled device.

Command 7F  
 Category Code 01  
 Parameter: 2 bytes  
 Return DEVICE SELECT RETURN [FF01]

| Data 5 | Data 6 | Function  | Remarks  |
|--------|--------|-----------|--|
| 0      | 0      | SD        | Sets the device to SD  |
| 1      | 0      | USB       | Sets the device to USB                                       |
| 1      | 1      | CD        | Sets the device to CD  |
| 2      | 0      | Bluetooth | Sets the device to Bluetooth                                 |
| 3      | 0      | FM        | Sets the device to FM (CD-400U)                              |
|        |        | DAB       | Sets the device to DAB (CD-400UDAB)                          |
| 3      | 1      | AM        | Sets the device to AM (CD-400U)                              |
|        |        | FM        | Sets the device to FM (CD-400UDAB)                           |
| 4      | 0      | AUX       | Sets the device to AUX                                       |
| F      | F      | Sense     | Requests the controlled device to return the current device. |

**PLAY AREA SELECT**

PLAY AREA SELECT sets the playback area of the controlled device. This command is not supported when the media is CD-DA.

Command 7F  
 Category Code 07  
 Subcommand 4F  
 Parameter: 2 bytes  
 Return PLAY AREA SELECT RETURN [FF07CF]

| Data 7 | Data 8 | Function              | Remarks |
|--------|--------|-----------------------|---------|
| 0      | 0      | All                   |         |
| 0      | 1      | Folder, not skip mode |         |
| 0      | F      | Folder, skip mode     |         |
| F      | F      | Sense                 |         |

If the source is CD-DA, it sends ILLEGAL [F2].

**ENTER**

ENTER works as same as pressing the main unit MULTI JOG dial or remote control ENTER button.

When a Menu Screen is open, ENTER confirms selections and settings.

When play area is folder and selecting a track/folder (folder icon is blinking), ENTER starts playback if a track is selected or moves down one level if a folder is selected.

When a message is displayed, ENTER replies Yes.

Command 7F  
 Category Code 70  
 Subcommand 49  
 Parameter: 2 bytes  
 Return None

| Data 7 | Data 8 | Function         | Remarks                          |
|--------|--------|------------------|----------------------------------|
| 0      | 0      | (Reserved)       | Reserved for ENTER key - Release |
| 0      | 1      | ENTER Key - PUSH |                                  |

**BACK**

BACK works as same as pressing the main unit BACK [PAIRING] button.

When the Menu screen is open, BACK returns to the Home Screen. When a Menu setting screen is open, BACK goes up one menu level.

When the current source is USB or SD and the play area is folder (the folder icon shown), this move up one folder level.

When the current source is BLUETOOTH, press and hold to activate Bluetooth pairing mode. When a Bluetooth connection is active (Connected shown), press to disconnect forcefully.

Command 7F  
 Category Code 70  
 Subcommand 4A  
 Parameter: 2 bytes  
 Return None

| Data 7 | Data 8 | Function                 | Remarks                          |
|--------|--------|--------------------------|----------------------------------|
| 0      | 0      | (Reserved)               | Reserved for ENTER key - Release |
| 0      | 1      | BACK key - Push          |                                  |
| 2      | 0      | BACK key - Push and hold |                                  |

**DEVICE SELECT RETURN**

DEVICE SELECT RETURN returns the information about the selected device.

Command FF  
 Category Code 01  
 Parameter: 2 bytes

Request command DEVICE SELECT [7F01]

| Data 5 | Data 6 | Function  | Remarks                       |
|--------|--------|-----------|-------------------------------|
| 0      | 0      | SD        | SD is selected                |
| 1      | 0      | USB       | USB is selected.              |
| 1      | 1      | CD        | CD is selected.               |
| 2      | 0      | Bluetooth | Bluetooth is selected.        |
| 3      | 0      | FM        | FM is selected. (CD-400U)     |
|        |        | DAB       | DAB is selected. (CD-400UDAB) |
| 3      | 1      | AM        | AM is selected. (CD-400U)     |
|        |        | FM        | FM is selected. (CD-400UDAB)  |
| 4      | 0      | AUX       | AUX is selected.              |

**PLAY AREA SELECT RETURN**

PLAY AREA SELECT RETURN is sent in response to the PLAY AREA SELECT command [7F074F]. This command is not supported when the media is CD-DA.

Command FF  
 Category Code 07  
 Subcommand CF  
 Parameter: 2 bytes

Request command PLAY AREA SELECT [7F074F]

| Data 7 | Data 8 | Function              | Remarks |
|--------|--------|-----------------------|---------|
| 0      | 0      | All                   |         |
| 0      | 1      | Folder, not skip mode |         |
| 0      | F      | Folder, skip mode     |         |

If the media is CD-DA, it sends ILLEGAL [F2].

---

**Revision List**

- Ver. 1.00 First issue
- Ver. 1.01 Change 7F01 "DEVICE SELECT" and FF01 "DEVICE SELECT RETURN"  
Delete Subcommand 32 DAB  
Change Subcommand 30: FM → FM for CD-400U / DAB for CD-400UDAB  
Change Subcommand 31: AM → AM for CD-400U / FM for CD-400UDAB
- Ver. 1.01 Collection of RS-232C command format
- Ver. 1.02 Collect errors
- Ver. 1.03 Collect errors
- P9 STOP: Add follows;  
If the mode is FM, AM or DAB, this command switches between frequency and preset modes.
- P10 TRACK SKIP: Add follows;  
If the mode is FM or AM and a preset number is not displayed (Frequency mode), this command changes the received frequency.  
If the mode is FM or AM and a preset number is displayed (Preset mode), this command moves to the previous or next preset number.
- P11 DIRECT TRACK SEARCH PRESET: Delete follows;  
If the mode is FM, AM or DAB, this command performs selecting preset station by specifying the preset number.
- Ver.1.10 Addition of SEARCH (</>), NO, ENTER and BACK commands
- P8 List of main commands in 3.4.List of Commands: "16 SEARCH" is added in the table.  
List of main commands in 3.4.List of Commands: "4A NO" is added in the table.  
List of vendor commands: "7F7049 – ENTER" and "7F704A – BACK" are added in the table
- P10 "SEARCH": 'SEARCH' item is newly added (between 'READY' item and 'EJECT' item).
- P13 "NO": "NO" item is newly added (between ' INCR PLAY SELECT' item and ' REMOTE/LOCAL SELECT' item).
- P18 "MECHA STATUS RETURN": "2 8 Searching forward" and "2 9 Searching backward" are added in the table of data.
- P25 "ENTER", "BACK": 'ENTER' and 'BACK' items are newly added.
- Ver.1.20 Addition/arrange for tuner control commands.
- P11 "DIRECT TRACK SEARCH PRESET": Arrange to set the preset number when AM/FM/DAB.
- P14 "TRACK No. SENSE": Arrange to request to return the preset number when AM/FM/DAB.
- P15 "CURRENT TRACK INFORMATION SENSE": Arrange to request to return the frequency when AM/FM/DAB.
- P18 "TRACK No. RETURN": Arrange to return the preset number when AM/FM/DAB.
- P19 "CURRENT TRACK INFORMATION RETURN": Arrange to return the preset or frequency information when AM/FM/DAB.
- P22 "CHANGE STATUS": Arrange to return the change status when frequency or preset is changed in AM/FM/DAB.
