MX-2424

Hard Drive Minimum Requirements – Spring 2004

MX-2424 hard drive requirements meet Digidesign Pro Tools SCSI hard drive requirements

- **SCSI Interface: 68-pin wide single-ended or LVD**
- **RPM: 7200 or faster**
- **Seek Time: 8.5ms or faster**
- **Internal Formatted Transfer Rate: 17 – 30 MB/sec or faster**

Please note that the above specifications are minimum requirements for normal operation of the MX-2424. While many current drives far exceed these requirements, there is no performance improvement gained.

However, due to hard drive firmware development undertaken by drive manufacturers which is beyond our control, we cannot guarantee any specific drive's compatibility.
