TASCAM ⏩

Instructions to Activate GigaStudio 4 – Upgrade Version

1. Go to TASCAM.com, click on Support and choose Registration

2. Type in the email address you used to register GigaStudio 3 and enter your password. If you don't know your password then go to "Forgot Password" on that page.

3. Update your current information and click next. You should see a list of products registered to this email address, including your GigaStudio 3 CD Key. (If you don't see your GigaStudio 3 CD Key, or no longer have access to your old email address, stop here and visit http://www.tascam.com/gigaissues.)
In the top-left corner of the window, under "Register Product," select "GigaStudio 4" from the pull-down window and click "Go."

4. Enter the date you purchased GigaStudio 4, then enter the GS4 CD Key where it says "Serial Number" and click "Register." The GS4 Upgrade CD Key is on the inside of your DVD case and begins with "740U-"

5. The registration page will detect that this is an upgrade version. It will then ask you to select a version of GigaStudio to upgrade. Select your GS3 CD key from the list and click "Go."

6. The web page will respond with a Syncrosoft Download Activation Code. Select this text and copy it (Control-C). A copy of the code will also be emailed to you.

7. If you haven't installed GigaStudio 4 yet, install it now but don't launch it yet. Instead, launch Syncrosoft License Manager in Start > Program Files > Syncrosoft > License Control Center. If your GigaStudio computer does not connect to the internet, you can download this software by going to

www.syncrosoft.com, clicking "Download" and choosing the Mac or Windows version.

8.   Plug in the USB dongle that came with your software. Launch License Control Center and select "License Download."
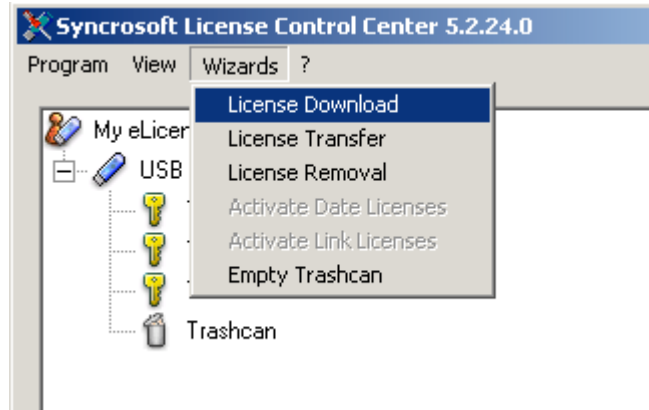

8.   Click Next to get to the download screen. Paste your Syncrosoft License Code into the first box. The software should identify it as a GigaStudio 4 code. Click Next.
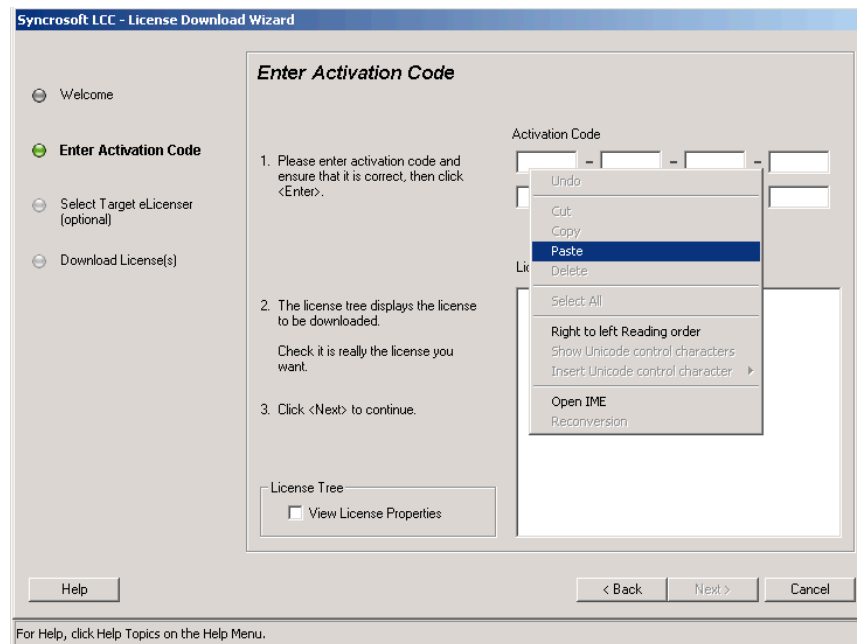

9.   Click "Download" to begin the download process. The software verifies the code online, then burns it to your USB dongle. When it's finished, your GigaStudio 4 license will be permanently attached to your USB key and you'll be able to use GigaStudio 4. (Don't be alarmed when the application tells you the Activation Code has been permanently disabled. This just means that the 'Activation Code' has been used and is no longer valid, but your dongle will work with GigaStudio 4.)
